DP305B
Spectrum Graphite
Pencils set of 12 Eco Box

*You will also need
some Milton Fluid or
equivalent to create
this technique!

Step by Step

LET'S CREATE

1

Prepare your workspace. You will need a cutting mat, a black t-shirt, stencil card, Milton fluid or equivalent, a cutting knife, pencils, masking tape, a palette and a brush.

2

Start by cutting down your stencil card to fit into the part of your t-shirt where you would like your faded design to go.

3

Begin to draw out your spooky scene such as a house or graveyard using a pencil. Think about which parts of your design will be revealed once it is a stencil.

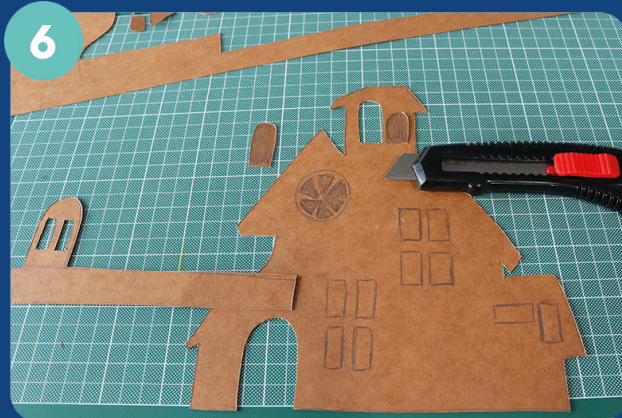

4

Next, draw in details such as a door and windows which can be cut out separately to your stencil. If it helps, shade these details in.

5

You can now start to cut out your stencil using a craft knife. Always cut in the direction away from you, and guide your paper with you when cutting around edges to help you.

6

Once you have your main background stencil, you can cut out your shaded windows and door. Remember to keep these separate and don't throw them away!

Step by Step

LET'S CREATE

7

Place your background stencil onto your t-shirt, tape into position, and place a thick piece of card in between the t-shirt to stop the bleeding of Milton. Lay out your windows and door details where desired, and leave a gap in between. These areas will mask the Milton Fluid.

8

Now you can start painting in your stencil using Milton Fluid. Best results are made using it neat. We recommend using a flat brush to get into the corners and edges of your stencil. The Milton Fluid will turn the fabric orange where it has been applied.

9

When your stencil is finished, why not add more by creating text stencils and outlining them with the Milton fluid.

10

Leave the Milton to dry, and then your design is complete. Why not try experimenting with spraying Milton Fluid instead of painting it to create interesting effects! Wash your t-shirt before wearing to avoid any irritation.
